Gamma-Ray Bursts GLOSSARY Afterglow: The less-energetic forms of electromagnetic radiation, including X rays, optical light and radio waves, that often follow the initial burst of gamma rays in a gamma-ray burst.

Several models for the origin of gamma-ray bursts postulated that the initial burst of gamma rays should be followed by slowly fading emission at longer wavelengths created by collisions between the burst ejecta and interstellar gas. This fading emission would be called the "afterglow".

Gamma Ray Bursts - astro.sunysb.edu

Gamma-ray bursts (GRBs) are the most extreme explosive events in the universe. The initial (prompt) phase lasts typically less than 100 s and has an energy content of $\sim 10^{51}$ ergs, giving a luminosity that is a million times larger than the peak electromagnetic luminosity of the bright emission from an exploding-star supernova.

Theories of Gamma-Ray Bursts 5 Independently of the nature and details of the progenitor and the trigger, such an intense, localized and brief explosion implies the formation of an $e^{\pm}, \hat{1}^3$ \rightarrow reball

Theories of Gamma-Ray Bursts - arxiv.org

A gamma ray or gamma radiation (symbol $\hat{1}^3$ or γ), is a penetrating electromagnetic radiation arising from the radioactive decay of atomic nuclei. It consists of the shortest wavelength electromagnetic waves and so imparts the highest photon energy.

Gamma ray - Wikipedia

About three times a day our sky flashes with a powerful pulse of gamma rays, invisible to human eyes but not to astronomers's instruments. The sources of this

FIRE AND LIGHT Gamma- Ray Bursts

Gamma-ray bursts are the most luminous explosions in the Universe, and their origin and mechanism are the focus of intense research and debate.

Death From Space – Gamma-Ray Bursts Explained

Gamma-ray bursts, whose origins are still contentious, are among the most intense flashes in the universe because much of their explosive energy is collimated into a tight beam, like that from a lighthouse. “We believe we are the first to find evidence for gamma-ray bursts that could not be detected with a gamma-ray telescope,” said Law, an assistant research astronomer in the Department ...

Scientists Find Evidence of “Orphan” Gamma-Ray Bursts

Gamma-ray bursts are much less common than regular supernovae, and in fact regular supernovae can do just as much damage as a GRB. However, for a supernova to produce the same effects it needs to ...

Extinction by Gamma-Ray Burst | Space Time

Gamma-rays can be used to treat cancer, and gamma-ray bursts are studied by astronomers. Electromagnetic (EM) radiation is transmitted in waves or particles at different wavelengths and frequencies.
