1. Intake stroke: draws air and fuel from the intake manifold, past the open intake valve, and into the cylinder. The amount of fuel going into the engine must be based on the amount of air going into the engine so the mixture is appropriate for the conditions.

I have worked with all of these except the for the Rankine turbine and thermionic generators. All engines have advantages and disadvantages. For use with my heliostats I have chosen either the Steam Rankine piston engine or the Rankine rotary expansion engine using propane as the working fluid.
